

Healthcare Information Security Management Solution

We provide a cost-effective security testing and management solution designed to secure protected health information and client assets

Health Insurance Portability and Accountability Act (HIPAA) Compliance

Burtelson is committed to providing security, privacy, and other HIPAA-related compliance services and solutions to assist our clients. Burtelson has extensive experience performing security assessments, establishing security policies and procedures, and conducting security compliance auditing.

Compliance can cost you.

The Healthcare Information and Management Systems Society, along with various other industry analysts, estimate that HIPAA compliance spending will likely exceed \$50 billion. A great deal of this cost will include remedial compliance initiatives, as well as the assessment and identification of gaps, risks and vulnerabilities in the current information security infrastructure. According to Gartner Group, however, organizations that deploy compliance management sooner will spend approximately 50% less annually to meet compliance requirements than organizations who get ahead. By leveraging Burtelson's qualified consultants, you can take advantage of a cost-effective and comprehensive risk management solution.

A cost-effective security and privacy integration service

Burtelson performs a wide variety of healthcare client information security management needs by offering a complete management and compliance service that is customized and designed to protect the confidentiality and availability of healthcare information. Burtelson helps clients expand and build upon their current information technology infrastructure which enables enhanced healthcare services and assists in the management of complex aspects of HIPAA and other regulatory requirements. Burtelson provides clients with a cost-effective, full-service solution that leverages a full range of skills and resources.
